EDITORIAL Happiness Is Mutual In Hardy Homecoming to-date Form 58. The fact that positions are advertised here does not preclude the use of other means to fill these vacancies.

Homecomings are occasions of rich sentimental joy, generally speaking. And, there was this element present as the Captain John I. Hardy family returned to China Lake this week. In the words of the new Commander, U.S. Naval Ordnance Test Station, "I cannot tell you how thrilled Dee (Mrs. Hardy)

and I are to be back home." Coming from a naval officer whose career includes service in combatant surface vessels in fierce, World War II engagements, two decades of distinguished service as a Naval Aviator, command of aviation squadrons and ships, the last of which, the USS Hornet, was a first-line aircraft carrier, the expression of

gratitude on returning to China Lake has a reciprocal effect. We, here at China Lake, are happy with your return. And, we feel a distinct pride in having you command NOTS during

the immediate years ahead. In return for your and Dr. McLean's leadership, you have asked only for our "best effort."

Be assured you will get it. Welcome Home, Captain and Mrs. Hardy!

CHAPLAIN'S MESSAGE

The well-adjusted Navy man develops a Pollyanna philosophy about changes of duty and the places they take him. "All duty is good duty," he says resolutely. "I've never had orders I didn't like.

Don't tell anybody, but we're frankly not that well-adjusted.

We must admit that there have been some tours of duty we have enjoyed more than others.

Then, too, our lack of equanimity has sometimes led us into an unsuspecting surprise: the first impression of a new assignment has often changed with the passing of time. That's how it has been at China Lake.

We well remember that day in July three years ago when we moved into our quarters. One of the men moving our household goods said it was 118 degrees. We didn't check him for accuracy; we just believed him.

Then, this was so different than other types of duty we had known in the past.

Like so many people, we were apprehensive about many things that involved change. Frankly, we weren't too sure this would be the place we

would later place at the top of our hit parade. Now that the time has come to leave, we do so with re-

luctance. It has been a rewarding experience. Mrs. Fenning, the children and I are grateful to so many for so much. It has been a high honor to serve both as chaplain and

citizen of this community

May our Lord keep all of you in His loving care.

, or any combination of these.

Deadline for filing is August 14.

(Continued from Page 3) in the program in the academic year 1962-63 need not reapply for admission to the school of Public Administration. They need only register on Sept. 9.

Registration Sept. 9 Registration will be held in Conference Room B, Michelson Lab, at 2:30-4:30 September 9. Cost of the course is \$40 per unit or \$160 total for the Complex Organization class.

Arrangements can be made with the registrar at that time for the deferred payment plan which is approximately one-third down plus a \$5 service charge, an additional one-third about six or eight weeks later and the last one-third about two weeks before the final exam.

Employees who wish to establish tuition refund eligibility must submit a completed NOTS Course Enrollment Form and/or Tuition Refund Certification, 11ND-NOTS-12410/28 to Mrs. Evelyn Moors, Code 654, prior to the first meeting of the class. Any inquiries for additional information should be directed to either Mrs. Evelyn Moors or Mrs. Eva Bien, Extensions 71451

Friday, August 7, 1964

What is not widely known to the general public - even to residents of China Lake, is the interest the Navy has taken in conservation of renewable natural resources for many years.

Background. It has been the continuing policy of the Department of the Navy that all activities which contain suitable land or water areas shall have an active progressing program for the management of renewable natural resources.

In the past the China Lake Naval Ordnance Test Station has cooperated with the U.S. Bureau of Land Management and with the State and Federal fish and game authorities as the need arose.

In addition to that, Captain F. L. Ashworth (now Rear Admiral) implemented the program by appointing a wildlife Conservation Council in 1956. Captain George H. Carrithers, Public Works Officer, was the first Chairman. The local Council hoped to establish a similar program here that was so successful at the Naval Ammunition Depot in McAlester, Oklahoma. Captain Carrithers was instrumental in the establishment and building of the McAlester game sanctuary.

Hunting was prohibited on the China Lake Station for two years before the Council was formed. Other members of the Council were: Cdr. F. R. Whitbey, Jr. (now Captain); Cdr. E. V. Horne; Lt. Col. H. V. Joslin, USMC, and myself.

Later the Council changed its name to Renewable Natural Resources Board to include water sources - soils - grass lands - forests and wildlife under the Station's jurisdiction.

PLAN ENACTED FALL 1962

In the fall of 1962 the program got its final shot in the arm when a formal Cooperative Plan for the Conservation and Development of Fish and Wildlife Resources was enacted. Signatures were: Capt. Blenman, COMNOTS; Paul T. Quick, Regional Director, Bureau of Sport Fisheries and Wildlife, Department of the Interior; and W. T. Shannon, Director, Department of Fish and Game, State of California.

The cooperation of the California State Fish and Game Department has been wonderful!

The chukar in this area was originally planted by the State Fish and Game Department in 1933 — brought here from India. Each year after the nesting season a survey is made by the wildlife managers from the State Fish and Game Department to determine how well the quail and chukars have been producing young birds. This information is used to determine the degree of trapping that is desirable and as of last season, the degree of hunting. This survey is done by counting the ratio of young birds to adults that come in to drink at the spring in the morning.

Wild chukars and quail have been trapped on this Station since 1954 and transplanted to areas throughout the State where these birds are not yet established. This program has been successful in establishing chukar and quail in areas where they did not exist before. That is China Lake's contribution to the overall game situation of the State. To date, a total of 5,453 chukars, 542 mountain quail, and 113 gamble quail have been trapped and transplanted.

Tthe State Game Managers have cooperated in many ways. That is their career. Conservation of natural resources renewable resources — and creating new areas for hunting and fishing recreation. Outdoor recreation is a National asset,

PUBLIC WORKS INSTALLS GUZZLERS The NOTS Public Works Department installed three guzzlers last year with the assistance of the California Fish and Game. The guzzler tanks were purchased by the State of California Wildlife Conservation Board

These devices collect water in the rainy season and store it for wildlife use in the hot summer months. It is a tank buried in the ground with a fan shaped area on the uphill side covered with asphalt that catches the rain and fills the tank so there is water all summer. Upland game habitat can be greatly extended by guzzlers.

(To Be Continued Next Week)
