Burroughs Players Play Old-Time Operetta Spoof

The Louisville Gypsy, a delightful piece of operetta that poking fun of the operetta genre, will be performed by students from various Burroughs classes. The show will be performed at 8 p.m. on Thursday, February 16, 1973, at the Burroughs High School Lecture Center.

The story of "The Louisville Gypsy" revolves around a "dancing daze" who becomes a gypsy street performer and a prince in disguise. It's a musical comedy that pokes fun at the operetta genre.

The show will feature music by Richard Rodgers and Oscar Hammerstein II, with book and lyrics by Hammerstein. It's a hilarious spoof of the operetta genre, with singing, dancing, and a lot of laughs.

The cast includes student actors from various classes, with outsourcing from members of the cast and crew.

Heart Disease Now Epidemic, ASPA Speaker Tells Audience

Heart disease today is occurring in epidemic proportions—similar to the tuberculosis epidemic of 188 years ago, Cdr. W. V. B. Vieweg, director of the Cardiac Catheterization Laboratory at the Naval Hospital in San Diego, told those in attendance at the Feb. 16 meeting of the American Society for Preventive Cardiology (ASPA).

The naval medical officer, a guest speaker at last year's ASPA meeting, said that more than two-thirds of the people in the audience at the ASPA heart meeting will be confronted with some cardiovascular catastrophe at some time in their life.

‘Bury’ more than 1 million people have heart attacks or morbidity from heart disease (188,000 to 208,000), which involves these, primarily men, under 65 years of age.

The ASPA is a group of American medical developing heart disease and how such disease can be prevented. The society, which was organized in 1967, has its national headquarters in Washington, D.C.

In outlining major risk factors contributing to heart attacks, Dr. Vieweg stated that arrhythmias can not be produced experimentally in animals without feeding them a diet high in fat and such diets result in high blood cholesterol levels.

Smoking also was mentioned as a contributing factor to heart disease. There's a 50 percent greater chance of having a heart attack a smoker to develop heart trouble than in those in the rest of the smoker, Dr. Vieweg, a radiologist, who is interested in preventive medicine, stated.

Other, but significant factors mentioned by Dr. Vieweg, as contributing to heart trouble, are diabetes and hypertension (diabetics have a higher incidence of heart attacks than normal people), obesity and cigarette smoking.

Dr. Vieweg pointed out that the same high blood pressure (95/65, or higher) that is the major killer in persons over 50 years of age is the major killer in persons over 50 years of age.
